TB-0373
AUTHENTICATED ACCESS
TO CONTROLLED WEB SITES

Issue Date: January 17, 2006
Effective Date: January 17, 2006
Section/Group: Enterprise Information Security Office
Submitted by: Jerri Howard
Approved by: Michael Allred

This Bulletin revises and updates ITS TB-373.

Web filtering on the State of Utah's network is currently accomplished using the BlueCoat proxy server and SmartFilter categories. Beginning January 17, 2006, to gain access to a Web site in one of the filtered categories, the Web Filtering Team has implemented access to authorized individuals through the UMD authentication login screen.

The BlueCoat blocked page will provide a login button to allow the authentication of the authorized customer. Authorized users will no longer need to provide a static IP address.

Customers that need access to a filtered category should have their manager send an e-mail request to webfiltering@utah.gov. Requests must include the category and a business reason.

Currently Filtered Categories

Anonymizers	Hacking	Spyware
Criminal Skills	Hate Speech	Tasteless/Gross
Drugs	Malicious Sites	Tobacco
Extreme	Phishing	Violence
Gambling	Pornography	

Currently Being Considered for Filtering

Alcohol
